the treatment, prevention and diagnosis of medical conditions caused by a canes. The disorders include SAPHO syndrome (synovitis, acne, pustulosis, hypertosis and osteomytalitis), uvaitis and endophthalmitis. P. acnes is also involved in infections of bone, joints and the central nervous system, however it is particularly involved in the inflammatory lesions associated with acnes in a patient comprises contacting a sample with a binding agent that binds to the proteins of the invention of and determining the amount of bound protein in the sample. The polypeptides may be used as antigens in the production of antibodies specific for P. acnes proteins. These antibodies can be used to downregulate expression and activity of P. acnes polypeptides and therefore treat P. acnes infections. The antibodies may also be used as diagnostic agents for determining P. acnes presence, for example, by charmed immunosorbent assay (BLISA). Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at

The invention relates to an isolated polymucleotide (Attrea4357-Acre4753) encoding a Propionibacterium acnes protein. The invention also relates to polypeptides encoded by the polymucleotides (ABM35624-ABM64536) and to imminogenic fragments of P. acnes polypeptides. The invention and to imminogenic fragments of P. acnes polypeptides of the invention additionally encompasses expression vectors and host cells comprising a diditionally encompasses expression vectors and host cells comprising of the invention; used to be invention; and the invention; and polymention from the comprising of the invention; a method for stimulating an immune response specific for a P. acnes to polypeptide and an isolated T cell population comprising T cells prepared via this method; a vaccine composition proteins, T cell populations, or confidence of the invention; or for detecting or determining the development of P. acnes in a carison presenting cells that express the polymedicties, antibodies, fusion proteins, T cell populations or antigen-presenting cells that express the proteins, T cell populations or antigen-presenting cells that express the patient; and a method for inhibiting the development of P. acnes in a patient; and a method for inhibiting the development of P. acnes in correcting, T cell populations or antigen-presenting cells that express the polymeties are useful for diagnosing, preventing or treating acnes to protein. The polymucleotides can also be used as probes or primers for nucleic acid hybridisation. The vaccine composition is useful for the stimulation of an immune response against P. acnes polymetic acid hybridisation. The vaccine composition is useful for performing a diagnostic assay. The present canding frame) contained within the P. acnes polymetice of and diagnostic candid to be encoded by an ORF (open canding frame) contained within the P. acnes polymetices of the cinnend within the P. acnes polymetices of the printed specification, but was obtained in electronic format directly from Interface of the pri
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ω

```
the inventor tradec's to an inventor acts compitably any one of the mucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the mucleic acid encoding a polypeptide whose expression is inhibited by the antisense mucleic acid; (2) a host cell containing the vector; (3) an isolated of polypeptide or its fragment whose expression is inhibited by the antisense mucleic acid; (4) an antibody capable of specifically binding the polypeptide or its fragment whose expression is inhibited by the cartisense mucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation, or that has an activity against a blological pathway crequired for proliferation, or that inhibits proliferation or the biological dentifying a gene product or that has an activity against a blological pathway in which a proliferation required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profilling a compound's activity; (11) a culture comprising strains in which the gene or organism acts; (9) manufacturing an antibiotic; (10) profilling a compound's activity; (11) a culture comprising strains in which the gene or to which each of the strains is present in a culture or collection of the strains or strains; or (3) identifying the target of a compound that inhibits the collection of an organism. The antisense mucleic acids are useful for identifying proteins or screening for homologus mucleic acids required for cellular promoter minder acids are useful for confident and all an enganged or antidate molecules for rational
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          MRNIE-ARGL-KQMKRQGDANVKGE-EGIVKAHL---LIGV-----HDDIVSMEYDLAY 120

ABN90538 to ABN93374 represent Staphylococcus epidermidis open reading frame (ORF) nucleic acid sequences which encode the amino acid sequences given in ABP35124 to ABP37960. The S. epidermidis sequences have antibacterial activity and can be used in gene therapy. The sequences can also be used in the diagnosis and treatment of bacterial infections, particularly S. epidermidis infections. The sequences can be used to soreen for compounds able to interfere with the S. epidermidis life cycle or inhibit S. epidermidis infection. N.B. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the USPTO web site

The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABH30511), expressed DNA sequences (ABL16176-ABH30511), expressed DNA ABB72072). The sequence data for this patent did not form part of printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       AAY36754-Y37949 are encoded by open reading frames (ORFs) of the genome of Chlamydia trachomatis (see AAZ01425). The polypeptides can be used as vaccines against Chlamydia trachomatis. Antisense and ribozyme sequences can also be used to control growth of the microorganism. Chlamydia trachomatis is responsible for a large number of diseases, e.g. eye plaseases such as conventional trachoma, nonendemic trachoma, paratrachoma, and inclusion conjunctivitis; genital diseases such as nongonococcal uretritis, epidymitis, cervicitis, salpingitis, versicallymphogranulomatosis. The polypeptides of the invention may be of use in treating these diseases

The invention relates to a protein (ABP25413-ABP30895) from group B streptococcus/GBS (Streptococcus agalactiee) or group A streptococcus/GBS (Streptococcus pyogenes), comprising one of 5883 sequences (S1), given in the specification. The proteins have antibacterial and antiinflammatory activity. (I), nucleic acids encoding (I), ABN66044-ABN71526 and antibodies that bind (I) are used in the manufacture of medicaments for the treatment or prevention of infection or disease caused by Streptococcus bacteria, particularly S. agalactiae and S. pyrogenes. Nucleic acids encoding (I) are used to detect Streptococcus in a biological sample. (I) is used to detectmine whether a compound binds to (I). A composition comprising (I) or a nucleic acid encoding (I), may be streptococcus that its prevented or treated may be meningitis. Nucleic stid encoding (I) may be used to recombinantly produce (I) and may be caid encoding (I) may be used to recombinantly produce (I) and may be chromatography, immunoassays, and distinguishing/identifying
                                                                                                                                                                                                                                                                                                                                         Streptococcus; GAS; GBS; group B streptococcus; Streptococcus agalactiae; group A streptococcus; Streptococcus pyogenes; antibacterial; antlinflammatory; infection; vaccine; meningitis; gene therapy.

A composition comprising the S. aureus protein, a nucleic acid encoding the protein, or an antibody to the protein, is useful as a pharmaceutical, particularly as a vaccine for treating or preventing infection due to Staphylococcus bacteria, specifically an infection caused by S. aureus. The composition is particularly useful for treating or preventing sepsis in a patient. The composition can also be used for diagnostics. The protein is also used in an assay for enzymatic studies and as a target for antibiotics. This sequence represents one of the novel S. aureus proteins of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               73 MRNIBARGLKQWKRQGDANVKGEEGIVKAH----LLIGVHDDIVSME--YDLAYKLGDL- 125 : | : : | : : | !: : | : : |

This invention describes novel human nucleic acid (CDNA) sequences (A), that are highly expressed in uterine tumour tissue and which have anticancer and cytostatic activity. (A) are used (1) for recombinant expression of polypeptides (B) and (ii) to isolate complete genes. (B) are used (1) to identify agents suitable for treatment of uterine or endometrial cancer; (ii) directly for treating these forms of cancer; (in) directly for treating these forms of cancer (in) directly for treating these forms of cancer (in) appending expression from gene therapy vectors) and (iii) for generation of specific antibodies. (A) are identified by assembling ESTS (expressed sequence tags) from a particular tissue type before comparison of expression patterns. This allows a significantly longer fragment of the gene to be revealed, so should reduce the number of failures associated with the fact that ESTS from different libraries may represent different parts of the same unknown gene, distorting the estimated frequency of occurrence in a particular tissue. AAY59941-Y60328 represent protein fragments encoded by the human endometrium tumour cDNA library derived EST fragments represented in AAZ41981-Z42121
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                nucleic acid sequences expressed in uterine cancer tissues, and ved polypeptides, for treatment of uterine and endometrial cancer and

The present invention is related to a Lactococcus lactis nucleotide sequence (ABA90521) and related proteins (ABB53300-ABB55621). The nucleic acid sequence is useful in the detection and/or amplification of nucleic acid sequence, particularly to identify Lactococcus lactis or related species. The proteins of the invention are useful for the biosynthesis or biodegradation of a composition of interest. The invention helps research in lactic bacteria, particularly useful in the production of yogurt and cheese. Note: The sequence data for this patent is based on equivalent patent WO200177334 (published 18-CCT-2001) which is available in flet witho.int/pub/published_pct_sequences. (Updated on 29-AUG-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              9

The invention relates to the gene cluster encoding the polypeptides responsible for the biosynthesis of the polyene antibiotic amphotericin responsible for the biosynthesis of the polyene antibiotic amphotericin useful for preparing amphotericin derivatives or analogue antibiotic amphotericins with altered properties and in the biosynthesis of polykeides other than amphotericin ampholIII, ampholII or amphoII amphotericin derivatives glycosylated with alternative sugars; amphoIII or amphoII

The present invention provides a number of nucleotide and protein are quences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from Coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence is a protein described in the exemplification of the invention. Note: The sequence date for this patent did not form part of the printed specification, but was obtained in electronic format directly from the European Patent Office

The invention relates to 971 novel human cDNA sequences (ADC29919-ADC30889) and the polypeptides they encode (ADC30890-ADC31860). The invention also relates to muclaic acid sequences over 99% identical with the novel human cDNAs. The invention additionally encompasses expression vectors and host cells comprising a nucleic acid of the invention; the recombinant production of a polypeptide of the invention; an antibody against a polypeptide of the invention; and methods of identifying a compound which binds to a polypeptide of the invention. The invention further discloses methods of peventing, treating or medical condition; kits comprising polynucleotide probes and/or monoclonal antibodies for carrying out the methods of the invention; methods for the invention of compounds that modulate the invention; methods for the polynucleotide and/or polypeptide; and 767 contig sequences corresponding to the cDNA sequences of the invention (ADC32628)

useful in diagnostics, drug screening, forenaics, gene mapping, in the identification of mutations responsible for genetic disorders or other traits, for assessing biodiversity, and in producing many other types of data and products dependent on DNA and amino acid sequences. They are disease and other neurodegenerative diseases, anaemia, platelet disease and other neurodegenerative diseases, anaemia, platelet cancer. The nucleic acids may also be used as hybridisation probes or primers, and in the recombinant production of a protein. The polypeptides are also useful in generating antibodies, as molecular weight markers, and as food supplements. The present sequence represents a specifically claimed human polypeptide sequence of the invention. Note: The sequence of the invention. Note: The sequence was obtained in electronic format directly from WIPO at the published_pot_sequence.
                                                                                                                                                                                                                                                                                                                                    4
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        요
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ठ
                                                    The invention relates to an isolated nucleic acid compitising any one of the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation or the activity of a gene in an operon required for proliferation or that has an activity against a biological pathway required for proliferation or that has an activity against a biological pathway required for proliferation or the the test compound that inhibits spoilferation of an organism the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a gene required for underexpressed, it underexpressed, it is a compound that inhibits the proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound, sactivity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent to which each of the strains is present in a culture or collection of strains; or (13) identifying the target of a compound that inhibits the contine of an organism. The antisense uncleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. prenumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at the sequence of the target proverded proverded proverded proverded 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         72 AMRNIEARGLKQMKRQGDANVKGEEGIVKAHLLIGVHDD---IVSMEYDLAY----- 120

```
The invention comprises the amino acid and coding sequences of human structural and cytoskeleton-associated proteins (SCAP). The SCAP DNA and protein sequences of the invention are useful for the diagnosis and treatment of: arteriosclerosis, atherosclerosis, cirrhosis, hepatitis, myelofibrosis, psoriasis, grimary cancer, pneumonia, chronic bronchitis, yellow fever, influenca, measles, mumps, HIV, human T lymphotropic virus, rabies, gastroenteritis, encephalitis, rubella, epilepsy, ischaemic cerebrovascular disease, stroke, cerebral neoplasm, Alzheimer's disease, Pick's disease, Pick's disease, Pick's disease, pick's disease, solerosis, meningtis, brain abscess, prion disease, Creutzfeldt-Jakob disease, insomnia, neurofibromatosis, cerebral palsy, myasthenia gravis, anxiety. The present amino acid sequence represents a human SCAP of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              80 -GLKQMKRQGDANVKGE-----EGIVKAHLLIGVHDDIVSMEYDLAYKLGDLHPT 128

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to an isolated nucleic acid derived from Enterococcus faccium encoding an Enterococcus faccium polypeptide having one of 10 fully defined sequences given in the (or comprising 40 sequential nucleotides chosen from any of the nucleic acids, its complement or sequences hybridising to it). Also included are a recombinant vector comprising the nucleic acid operably linked to transcription requlatory element, a cell comprising the vector and a single-stranded probe comprising the nucleic acid. The nucleic acids is useful for diagnosing pathological conditions. The nucleic acids is useful for diagnosing pathological conditions infection, bacteraemia, endocarditis, wounds and abdominal-pelvic infection, and for screening drugs such as agonists and antagonists. The nucleic acid is useful for recombinant production of Candida albicans of and vaccines conteaining the nucleic acid are useful for preventing or treating Enterococcus faecium infections.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                tο
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to polypeptides comprising an immunogenic part of a Leishmania antigen. The Leishmania polypeptides and their associated DNA sequences, epitopes and fusion proteins are used in the production of compositions used for inducing a protective immune response against leishmaniasis, for prevention and treatment of the disease. The compositions can also be used generally to treat diseases that respond to interleukin-15 stimulation. In addition, the products may contain an immunostimulant. Sequences AAU11805. AAU71805.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            88

The compositions and methods of the present invention are useful for preventing, treating and detecting invention are useful for preventing, treating and detecting leishmaniasis, and stimulating immune responses in patients against leishmaniasis. The polypeptides and the polymucleotides encoding them can be used for gene therapy, in vaccines or as interleukin-12 agonists. The compositions and methods of the present invention, as compared to prior art, are more improved therapeutic modalities in the diagnosis, prevention and treatment of leishmaniasis

The invention relates to an isolated polypeptide comprising an immunogenic portion of a Leishmania antigen or its. Also included are antigenic epitopes, fusion proteins comprising an isolated polypeptide fusion protein comprising at least two contiguous antigenic epitopes, polynucleotides encoding the antigens or fusion proteins, a recombinant expression vector comprising the polynucleotide, a host cell transformed with the vector and a composition (pharmaceutical or immunogenic) comprising the antigen or fusion protein and a physiologically acceptable carrier. The compositions are useful for inducing protective immunity

against leishmaniasis in a patient. The fusion protein is useful for the detecting Leishmania infection in a patient by contacting dermal calls of the patient with the composition and detecting an immune response on the patient's skin, where the immune response is induration. The compositions are useful for stimulating a cellular and/or humoral immune response in a patient, or for treating a cellular and/or humoral immune response in a interleukin (IL)-2 stimulation, where the disease responsive to interleukin (IL) as bacterial, wirsh or protozoan infection. The antigen is useful for preventing or treating leishmaniasis. The present sequence represents a Leishmania antigen (or fragment).
                                                                                                                                                                                                                                                                                                                                                 10;

New nucleotide sequence useful in the identification or Lactococcus lactis and related species. WPI; 2002-043418/06.

Ehrlich SD;

The present invention is related to a Lactococcus lactis nucleotide sequence (ABA90521) and related proteins (ABB5300-ABB55621). The nucleic acid sequence is useful in the detection and/or amplification of nucleic acid sequence, particularly to identify Lactococcus lactis or related species. The proteins of the invention are useful for the biosynthesis or biodegradation of a composition of interest. The invention helps research in lactic bacteria, particularly useful in the production of yogurt and cheese. Note: The sequence data for this patent is based on equivalent patent WO200177334 (published 18-OCT-2001) which is available in Claim 6; SEQ ID NO 507; 2504pp; French.

This invention describes a novel disease detection and treatment molecule polypeptide (MDDT) which has anti-inflammatory, immunosuppressive, catteopathic, cytostatic, anti-HIV, haemostatic, nephrotropic, antianaemic, antipsoriatic and heparotropic activity. The polymucleotides cand the polypeptides of the invention can be used for gene therapy, of protein replacement therapy and are useful for treating a variety of diseases or conditions. These polypeptides or polymucleotides are particularly useful for diagnosing, treating or preventing call proliferative disorders (e.g. cancers including adenocarcinoma, lumphoma, melanoma, myeloma or sarcoma), anaemia, Crohn's clusaemia, lymphoma, melanoma, myeloma or sarcoma), anaemia, Crohn's syndromes, inflammation, osteoporosis, thrombocycopaenia, psoriasis or hepatitis. ABUI1450-ABUI1845 represent the MDDT polymucleotides encoded by ABUI1450-ABUI1845, described in the disclosure of the invention. NOTE: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          763
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       88
New purified disease detection and treatment molecule proteins and polynucleotides, useful for diagnosing, treating or preventing cancers (e.g. leukemia or sarcoma), anemia, Crohn's disease, AIDS, osteoporosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            764 DKDRKDLBGRLKAR----EDLLLPIYHQVAVQFADFHDTPGRMLEKGVISDILEWKTAR

The invention relates to novel human secreted polypeptides. The polypeptides and antibodies to the polypeptides are useful for determining the presence of or predisposition to a disease associated with altered levels of polypeptide. The polypeptides are also useful for identifying agents (agonists and antagonists) that bind to them. Cells expressing the proteins are useful for identifying a therapeutic agent for use in treatment of a pathology related to aberrant expression or physiological interactions of the polypeptide. Vectors comprising the nucleic acides encoding the polypeptides and calls genetically engineered to express them are also useful for producing the proteins. The proteins are useful in genetic vaccination, testing and therapy, and can be used to an unitional supplements. They may be used to increase stem cell proliferation; to regulate haematopolesis; and in bone, cartilage, tendon and/or nerve tissue growth or regeneration; immune suppression and/or stimulation; as anti-inflammatory agents; and in treatment of leukaemias. ANU29510-AAU33304 represent the amino acid sequences of novel human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Nucleic acids encoding a range of human polypeptides, useful in genetic vaccination, testing and therapy.
                                      Human, vaccination, gene therapy, nutritional supplement, stem cell proliferation, haematopoiesis, nerve tissue regeneration; immune suppression, immune stimulation, anti-inflammatory, leukaemia.
Novel human secreted protein #3339.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Claim 20; Page 678; 765pp; English.
                                                                                                                                                                                                                                                                         16-APR-2001; 2001WO-US008656.
                                                                                                                                                                                                                                                                                                                    18-APR-2000; 2000US-00552929.

                                                                                                                                                                                                                                                                                                                                                                                                                                    Tang YT,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Matches
DME-1 to DME-13 (ABP59210-ABB5922) and their coding sequences (ABZ81311). The sequences are useful for diagnosing, treating or preventing disorders associated with aberrant expression of DME, particularly cell proliferative disorders (a arteriosalerosis, cirrhosis, paroxysmal nocturnal haemoglobinuria, atherosalerosis, cirrhosis, paroxysmal nocturnal haemoglobinuria, colopmental disorders (e.g. renal tubular acidosis, anaemia or mental retardation), endocrine (e.g. orteoporosis, thrombocytopenia or cancer), developmental disorders (e.g. renal tubular acidosis, anaemia or mental retardation), endocrine (e.g. orteoporosis, thrombosis, diabetes), ed disorders (e.g. gratrointestinal disorders (e.g. spatrointestinal disorders (e.g. spatroenteritis, diarrhosa), liver disorders (e.g. hepatitis, Reye's syndrome), or autoimmune/inflammatory disorders (e.g. AIDS, allergies, asthma, autoimmune/inflammatory disorders (e.g. AIDS, allergies, asthma, autoimmune/inflammatory disorders (e.g. AIDS, allergies, asthma, autoimmune thyroiditis, contact dermatitis, Crohn's disease, Hashimoto's thyroiditis, irritable bowel syndrome, multiple sclerosis, oftense bronditis, parocreatitis, Reye's syndrome, multiple sclerosis, stormore syndrome, uveitis). They are also useful in the assessing the effects of exogenous compounds on the expression of mucleic acid and for more also sequences of DME. The polymucleotides encoding DME are useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            2268

mapping naturally occurring genomic sequences. ABB84649-ABB84673 represent secreted proteins encoded by the cDNA's shown in ABS57545-ABS57569, described in the disclosure of the invention

```
Human SECP-1 protein from clone 7757335CD1 SEQ ID 1.
```

Secreted protein; SECP; human, antiarteriosclerotic; antiatherosclerotic; hepatotropic; oytostatic; anti-HIV; antiallergic; antiaschmatic; cancer; antianemic; antidabetic; antiflammatory; neuroprotective; antiulcer; antitheumatic; antiathritic; cardiant; hypotensive; gonadal dysgenesis; vasotropic; anticonvulsant; nootropic; immunosuppressive; pericarditis; antiparkinsonian; ophthalmological; cell proliferative disorder; arteriosclerosis; atherosclerosis; cirrhosis; hepatitis; angina pectoris; autoimmune disorder; AIDS; Crohn's disease; multiple sclerosis; epilepsy; ulcerative colitis; cardiovascular disorder; myocardial infarction; Raymaud's disease; myocarditis; neurological disorder; cataract; Huntington's disease; Alzheimer's disease; Crettzfeldt-Jakob disease; developmental disorder; Duchenne muscular dystrophy; antipsoriatic; Becker muscular dystrophy; Cushing's syndrome.

2003-058429/05. WPI; 2003-058429/ N-PSDB; ABS57545 Novel human secreted protein useful for treating, preventing or diagnosing cancer, hepatitis, psoriasis, asthma, diabetes mellitus, anemia, epilepsy, cataract, Alzheimer's disease.

Claim 56; Page 143-149; 188pp; English.

This invention describes novel secreted proteins (SDCP) which have antiarteriosclerotic, antiatherosclerotic, hepatotropic, cytostatic, antiarteriosclerotic, antiathmatic, antialabetic, antidiabetic, antidiabetic, antiathmatory, neuroprotective, antialcer, antipseriatic, vasotropic, antiarthritic, cardiant, hypotensive, anticonvulsant, nootropic, immunosuppressive, antiparkinsonian and ophthalmological.

Continity The polymucleotides and polypeptides of the invention can be cativity. The polymucleotides and polypeptides of the invention can be used for diagnosing, treating or preventing cell proliferative disorder.

Continity antialist, anticonsist, atherosclerosis, directions, disorder.

Continumune/inflammatory disorders e.g. acquired immunodeficiency syndrome attoinmunne/inflammatory disorders e.g. acquired immunodeficiency syndrome conditives allerosis, ulcerative colitis, psoriasis, rheumatorial anticonders active colitis, psoriasis, rheumatorial anticonders e.g. myocardial infarction, angina pectoris, hypertension, Raymaud's disease, myocardial infarction, angina pectoris, contrological disorders e.g. puchenne and Becker muscular dystrophy, disease, Alzheimer's disease, Creutzfeldt-Jakob disease, etc; and developmental disorders e.g. Duchenne and Becker muscular dystrophy, caterator, gonadal dysgenseis, contrological disorders e.g. cateratory and also be used for drug sorreening, proteome analysis, microarrays creating knock-in humanised animals or transgenic animals to model human diseases, in somatic or germline gene therapy, to generate a transcript image of a tissue or cell type, for detecting differences in commal, carrier or affected individuals, and as hybridization probes for normal,

```

This invention describes novel human NOVX polypeptides which have cytostatic, cardiant, antiarteriosclerotic, antiasthmatic and hypotensive activity. Pharmaceutical compositions comprising the NOVX proteins or nucleic acid molecules or NOVX antibodies are useful for preventing or treating a disorder associated with aberrant NOVX expression or activity esq. cancer, hypotension, atherosclerosis, cardiamyopathy or bronchial asthma. The products of the invention can be used for gene therapy or in a vaccine. ABUGEO41-ABUGEO48 represent the NOVX polypeptides encoded by

AAH52104 to AAH53970 represent nucleic acids (I) encoding polypeptides (II), given in AAG81454 to AAG83120, from Staphylococcus epidermidis. (I) and have antibacterial activity and therefore can be used in vaccination. The nucleic acids (I) may be used to produce the S. epidermidis polypeptides (II) via the production of vectors containing them which are used to produce hosts cells which express the collypeptides. The polypeptides (II) (and/or nucleic acids) may then be used to vaccinate subjects and to raise antibodies against the bacteria. The polypeptides may also be used to assay for other inhibitors of their activity and therefore identify compounds that may be used for the treatment of S. epidermidis infections, e.g. endocarditis. AAH53971 to AAH55090 represent specifically claimed S. epidermidis genomic DNA polymorleotide sequences and primers which are used in the exemplification of the present invention. N.B. The present invention specifically claims all the polymorleotide sequences given in the cepture of the present experience of the present invention of the present specification, however the sequence listing only goes up to SEQ ID NO:4454 so even though sequences are given the present of th

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to novel genes and encoded proteins from Staphylococcus aureus. A composition comprising the S. aureus protein, a nucleic acid encoding the protein, or an antibody to the protein, is useful as a pharmaceutical, particularly as a vaccine for treating or preventing infection due to Staphylococcus bacteria, specifically an infection caused by S. aureus. The composition is particularly useful for treating or preventing sepsis in a patient. The composition can also be used for diagnostics. The protein is also used in an assay for enzymatic studies and as a target for antibiotics. This sequence represents one of the novel S. aureus proteins of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      240

ABN90538 to ABN93374 represent Staphylococcus epidermidis open reading frame (ORF) nucleic acid sequences which encode the amino acid sequences given in ABP35124 to ABP37960. The S. epidermidis sequences have antibacterial activity and can be used in gene therapy. The sequences can also be used in the diagnosis and treatment of bacterial infections, particularly S. epidermidis infections. The sequences can be used to screen for compounds able to interfere with the S. epidermidis life cycle or inhibit S. epidermidis infection. N.B. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the USPTO web site
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   258 AQQY--HAHVITIDENL----NKVCHVQGITALN-,----VNDLSEAIRPNVHQGDQLSIL 306

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      --⊹∂--
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           AAY34584-V35879 represent the proteins encoded by all the open reading frames in the complete ganome (see AAX91990) of Chlamydia pneumoniae. C. pneumoniae causes respiratory disease such as pneumonia and bronchitis and is thought to be a contributing factor in heart disease, sarcoidosis, sinusitis, purulent otitis media, erythema nodosum or pharyngitis. The polypeptides encoded by the open reading frames of the C. pneumoniae genome (see AAY34584-Y35879) can be used in immunogenic compositions as vaccines. Vectors containing C. pneumoniae nucleotides sequences can also be used as immunogenic compositions, especially where the vector directs the expression of a neutralising epitope of C. pneumoniae.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              113
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         61
                                                                                                                                                                                                                                                                                                                                                           This represents the Chlamydia pneumoniae 1pdA protein. The 1pdA protein can be expressed by standard recombinant methodology. The 1pdA protein, polyuucleotide and antibodies specific to the protein and vaccines comprising the 1pdA protein are useful for preventing or treating chlamydia (C. trachomatis, C. psittaci, C. pneumonia or C. pecorum) infection. Vaccine vectors, and the 1pdA protein are useful in the preparation of medicaments for preventing and/or treating Chlamydia infection. Primers and probes derived from the 1pdA gene are also useful for detecting and/or identifying Chlamydia in the biological material. (Updated on 11-SEP-2003 to standardise OS field)

The present invention describes compositions comprising a Chlamydia Capi protein and methods for the diagnosis and therapy of Chlamydia infection. Chlamydia DNA and protein sequences from the present invention can have antibacterial and immunostimulant activities, and can be used in vaccines. Compounds from the present invention can be used for eliciting an immuno response, specifically stimulating a Chlamydia-specific. T-cell response or inhibiting the development of a Chlamydia infection in an presence of Chlamydia in patient; to stimulate and/or expand T cells specific for a Chlamydia in a patient; to stimulate and/or expand T cells specific for a Chlamydia in a patient; to stimulate and/or expand T cells specific for a Chlamydia and ABB94096 to ABB94374 represent sequences used in the exemplification of the present invention. (Updated on 29-AUG-2003 to standardise OS field)
                                                                                                       Chlamydial infection, Chlamydia, vaccine, detection, diagnosis, antigen, antibacterial; immunostimulant, immune response, Chlamydia-specific T-cell response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel compositions comprising Chlamydia Capl protein and its use in the treatment of Chlamydia infection.
                                                                      Chlamydia pneumoniae protein sequence SEQ ID NO:399.
                                                                                                                                                                                                                                                                                                                                                                                                                         Probst P, Bhatia A;

The first in relates to an isolated muchael acid comparising any one or the 6213 antisease sequences given in the specification where expression of the mucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense mucleic acid; (2) a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the acidic cacid; (4) an antibody capable of specifically binding the polypeptide (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation or that has an activity against a biological pathway required for proliferation, or that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation of the biological pathway in which a proliferation-required gene or its gene product its corpound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a pene activity; (1) a culture compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound's activity; (1) a culture compound that inhibits in which the test compound that inhibits in which the cartivity; (1) a culture comprising strains in which the cartivity; (1) a culture comprising strains in which the cartivity; (1) a culture comprising strains in which the cartivity; (1) a culture comprises a compound that inhibits the proliferation of an organism. The antisense nucleic acids are useful for which each of the strains is present in a culture or collection of strains in proliferation of an organism. The new acute manufact acids are useful for the target prokaryotic essential genes. Note: The sequence data for this cultural directly from WIPO at the present sequence of the target prokaryotic essential genes. Note: The sequence data for this culture.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to an isolated nucleic acid comprising any one of

                                                                                                                                                                                                                                                                                                                                                                                                                                                          thrombocytopaenia, adult respiratory distress syndrome, renal failure, liver disease and conditions associated with Gram negative bacterial ninfection. The RENP has an enhanced serum half life relative to naturally occurring BPI, and binds LPS without triggering a significant, undestrable immune response. N. B. Sequence not given in specification, but produced using the wild type hBPI sequence given in figure 3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       63 GIVDFKGELAMRNIEAR------GLKOMKROGDANVKGEEGIVKAHLLIGV 107

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     108 HDDI----VSMEYDLAYKLGDLHPTTHVISDIQDFVVALSLEISDEGNITMTSFEVRQFA 163
                                                                                                                                                                                                                          The present sequence is the recombinant endotoxin neutralising polypeptide (RENP) B(GAT9) (NCY139), which comprises the human bolypeptide (RENP) B(GAT9) (NCY139), which comprises the human boatericidal/permeability increasing protein (BBP1) mutant Lys148Gly, Lys150Asp, Lys160Asn, Lys161Gln, Arg167Gln, Lys169Val, Lys177Met, Lys185Asp, Lys198Glu. The RENP, which selectively and specifically binds lipopolysaccharide (LPS) and has endotoxin neutralising activity, can be used to detect a site of Gram negative bacterial infection, and prevent or treat endotoxin related disorders, preferably where LPS mediated stimulation of neutrophils and mononuclear cells is inhibited, e.g. shock, disseminated intravascular coagulation, annewna, had an end of the coagulation, annewna, and the coagulation and manemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             77
                                                                                      Lipo:polysaccharide binding and endotoxin neutralising polypeptide - useful in diagnosis, prevention and treatment of Gram-negative bacterial infection and associated disorders and conditions.

                                                                                                                                                                                                                                                                                                                                                                                                                                                AAY36754-Y17949 are encoded by open reading frames (ORFs) of the genome of Chlamydia trachomatis (see AAZ01425). The polypeptides can be used as vaccines against Chlamydia trachomatis. Antisense and ribozyme sequences can also be used to control growth of the microorganism. Chlamydia trachomatis is responsible for a large number of diseases, e.g. eye paratrachoma, and inclusion conjunctivitis; genital diseases such as nongonococcal uretritis, epidymitis, cervicitis, salpingitis, epidymitis, vervicitis, salpingitis, and perihappathis, bartholinitis; pheumopathy in breast feeding infants; and venereal lymphogranulomatosis. The polypeptides of the invention may be of use in treating these diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                101 GDYVILHGKLIVYAPRGQYQIVAYALTFSGEGNL-----LQQFEERKQRLAAEGYFDPK 154

Yamamoto J;

Saito K, Ya , Otsuki T,

The present invention describes primer sets for synthesising 5602 fulllength cDNAs defined in the specification. Where a primer set comprises:

(a) an oligo-dr primer and an oligonuclectide complementary to the complementary strand of a polynuclectide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonuclectide comprises at least 15 nucleotides; or (b) a combination of an oligonuclectide comprises a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide which comprises a 1'-end sequence complementary to a polynucleotide which comprises a 1'-end sequence of sequence of a combination of the 5'-end sequence 3'-end sequence 15 selected from those defined in the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesishing polynucleotides, particularly full-length cDNAs. The primers are also useful for the primers are useful for synthesishing polynucleotides, particularly full-length cDNAs. The primers are also useful for the full-length cDNAs. The primers allow obtaining of the full-length cDNAs assily without any specialised methods. AAH1363 to AAH1363 and AAH13633 to AAH13631 represent human amino acid sequences; and AAH13629 to AAH1362 represent human amino acid sequences; and AAH13629 to AAH1362 coligonucleotides, all of which are used in the exemplification of the primers are used in the exemplification of the Query Match 7.7%; Score 82; DB 4; Length 767; Best Local Similarity 22.9%; Pred. No. 18; Matches 36; Conservative 30; Mismatches 55; Indels Sequence 767 AA;

The present invention describes primer sets for synthesising 5602 full-

[1] In oligo-dr primer and an oligonucleotide complementary to the

[2] Complementary strand of a polynucleotide complementary to the

[3] Complementary strand of a polynucleotide which comprises one of the 5602

[3] Complementary strand of a polynucleotide which comprises a combination

[3] Complementary strand of a polynucleotide which comprises a 5'-end

[4] Complementary strand of a polynucleotide which comprises a 5'-end

[5] Sequence and an oligonucleotide comprising a sequence complementary to the

[5] Complementary strand of a polynucleotide which comprises a 5'-end

[5] Sequence and an oligonucleotide comprises a 5'-end

[6] Sequence and an oligonucleotide comprises a 5'-end

[7] Sequence and an oligonucleotide comprises a 5'-end

[8] Sequence and an oligonucleotide comprises and an entre sets can be used in antisense therapy and in

[8] Section and/or diagnosis of the abnormality of the proteins encoded by

[8] Complementary strands and sequences; AMH13631 to AMH13632 represent human annino acid sequences; AMH13632 to AMH13632 represent human annino acid sequences; and AMH13632 to AMH13632 represent human annino acid sequences; and AMH13632 to AMH13632 represent human annino acid sequences; and AMH13632 to AMH13632 represent human annino acid sequences; and AMH13632 to AMH13632 represent human entre and the exemplification of the annormal and the exemplification of the anear and annormal and the exemplementary and the annormal and the 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        15 VSADPIHYDKITEEINKAIDDAIAAIEQSETIDPMKVPDHA-DKFERHVGIV---DFKGE

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention provides a number of nucleotide and protein sequences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from the expression profile or expression pattern of a gene derived from coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacterium and analysing a coryneform bacterium. Vitanins, saccharides and organic acids, particularly L-lysine. The present sequence is a protein described in the exemplification of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the European Patent Office
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           GIVDFK-GELAMRN---IEARGL--KQMKRQGDANVKGEEGIVKAHL--LIGVHDDI--V 112

The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell.cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical furugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-BB120707). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ŝ                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  GENERAL INFORMATION:
Patent No. 6551795
GENERAL INFORMATION:
PAPELICANT: MARC J. Rubenfield et al.
APPLICANT: MARC J. Rubenfield et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS.
TITLE OF INVENTION: ABRUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: 107196.136
CURRENT APPLICATION NUMBER: US/09/252,991A
CURRENT APPLICATION NUMBER: US 60/074,788
PRIOR APPLICATION NUMBER: US 60/094,190
PRIOR FILING DATE: 1998-02-18
PRIOR FILING DATE: 1998-02-18
PRIOR FILING DATE: 1998-02-18
PRIOR FILING DATE: 1998-07-27
NUMBER OF SEQ ID NOS: 33142

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 4081, Application US/09134001C

Patent No. 6380370

GRERAL INFORMATION:
APPLICANT: Lynn Doucette-Stamm et al
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO STAPHYLOCOCCUS
TITLE OF INVENTION: EPIDERMIDIS FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: GTC-007
CURRENT APPLICATION NUMBER: US/09/134,001C
CURRENT FILING DATE: 1998-08-13
PRIOR APPLICATION NUMBER: US 60/064,964
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  12;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 894, Application US/09198452A

Patent No. 6559294

GENERAL INFORMATION:

APPLICANT: Griffais, R.

TITLE OF INVENTION: Chlamydia pneumoniae genomic sequence and polypeptides, fragments

TITLE OF INVENTION: thereof and uses thereof, in particular for the diagnosis, prevering PILE REPERENCE: 9710-003-999

CURRENT APPLICATION NUMBER: US/09/198,452A

CURRENT FILING DATE: 1998-11-24

NUMBER OF SEQ. ID NOS: 6849
                                                                                                                                                                                                                 Sequence 4057, Application US/09134001C

Patent No. 6380370

GENERAL INFORMATION:

APPLICANT: Lynn Doucette-Stamm et al

TITLE OF INVENTION: BPIDERMIDIS FOR DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVENTION: BPIDERMIDIS FOR DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVENTION: BPIDERMIDIS FOR DIAGNOSTICS AND THERAPEUTICS

CURRENT APPLICATION NUMBER: US/09/134,001C

CURRENT FILING DATE: 1998-08-13

PRIOR PEDICATION NUMBER: US 60/064,964
